CLEANING SILKLINE LINERS

Caring for your Liners

Baytex Tent & Structure Linings are manufactured from 100% polyester fire retardant filament for maximum durability and easy care.
All Baytex Lining Fabrics are inherently flame retardant, they have a soft finish with a beautiful silky sheen that resists hard creasing.

Handling & Washing Instructions
Prior to laundering, fold each liner section in half, right/face sides out, joining the hook and loop strips of Velcro completely together. This is important because the Velcro can snag the seams and fabric during the washing.

General Washing
Launder in a domestic or commercial washing machine. Use cool water and a small amount of mild detergent only that does not contain chlorine bleach. Chlorine will cause the velcro and PVC to yellow. Excess detergent that does not rinse out will leave a white residue that shows when the liner is installed. If in doubt, rinse twice. Washing instructions are on the valance web line of each liner section and their storage bags.

Spots and Stains
Spot clean only as necessary with Duzall Cleaner https://www.bioworks.co.nz/rec-res-cleaning (bioworks.co.nz or purchase through Baytex). To remove rust apply baking soda to stain and rub gently with a white Scotch-Brite sponge. Rinse with water before washing.

Drying
Fluff dry thouroughly using cool or warm air (max 35°C / 95°F) or hang to dry.
If hanging to dry be sure to separate the velcro hook and loop to speed drying process.
When the webbing and velcro is thoroughly dry, re-stuff the liners into their storage bags. Repeated washing enhances the liners, creating a soft sheen. Do not put wet or damp liners in the storage bags as mildew will occur and discolouration cannot be removed. Note: continual washing will not remove the liners fire retardant properties.

A Smoother Finish
For wrinkle or crease touch-up, garment steamers are very effective to improve the finished look on the valances and leg drapes. Avoid hot irons.

Baytex Liners adhere to strict fire code requirements in many countries as listed below:

Fire Rating Certificates AS/NZ 1530; PtsII & III ▪ DIN 4102-1 ▪ NTA 8007:2007 'Brandgedrag van Verseiringsmaterialen' Classification B ▪ NF P 92-512:1986-M1 ▪ BS5867 Part 2 Type B ▪ NFPAI 701 (small scale)
Certificate of Compliance & Flame Retardance NFPA-701 ▪ CPAI-84 ▪ New York Board - Bull #44
